SUNSHADES

WALL PANELS

LOUVERS & SCREENS

ENGINEERING: Working closely with architects and contractors, PCG custom designed systems are certified by licensed professional engineers to comply with local and state building codes.

CONNECTIONS: Custom designs are available in mechanically fastened or welded connection systems. Both systems provide greater structural integrity and unique aesthetic appearances.

FINISHES: Options include mill finish, powder coating, Kynar/Hylar, standard enamel and anodized. Select a color from the standard PCG color chart to custom match the specific requirements of your building project.

LEED: PCG will work with you to optimize your custom designed system to create a sustainable design that promotes a higher standard of energy efficiency.

GUARANTEE: All custom designs include an industry standard warranty. Our work is guaranteed to be free from defects in materials and workmanship during the extent of this period.

STANDARD: We also offer standard PCG designs and solutions with the same quality materials and craftsmanship as our custom work. Choose from one of our existing designs and let us help you personalize it according to your specifications!
