ENGINEERING: PCG sunshade designs are certified by licensed professional engineers to withstand potential loading conditions as required by local and state building authorities.

CONNECTIONS: Blade/fin connections are available in either mechanical or welded designs. Mechanical connections utilize the screw boss in the blade and fascia pieces for connection to outriggers. In the welded design, the blade and fascia pieces are welded to the outriggers for greater strength and non-exposed fastener appearance.

FINISHES: PCG sunshade finishes include mill finish, powder coating, Kynar/Hylar, standard enamel and anodized. Choose a color from the standard PCG color chart or select a custom color to match the specific color requirements of your building project.

LEED: PCG will customize any standard sunshade to ensure that you achieve the sunlight reduction values that are required for your LEED certified building project.

GUARANTEE: All PCG sunshade systems include an industry standard warranty. Sunshade systems are guaranteed to be free from defects in materials and workmanship during this period.

CUSTOM: While PCG offers a variety of standard sunshade system designs, we can custom create the system that works best for you!
